

Coronavirus COVID-19: Mandatory Student Screening Form

Students who have been approved to commence placement at Ramsay Health Care are required to complete the following details at orientation, if not completed prior.

The following questions are mandatory to determine your current level of risk associated with COVID-19, and outline precautions to reduce the risk to you, our staff and our patients.

Mandatory Student Screening Form	YES	NO
Have you returned from overseas in the past 7 days?		
Have you been in mandatory isolation in the past 14 days?		
Have you been identified as a close household contact of a confirmed COVID case in the last 7 days?		
Have you been tested for COVID and are currently waiting the result?		
Have you been diagnosed in the past 10 days as a confirmed COVID positive case?		
Do you currently work in a Health Care or Residential Aged Care setting with a confirmed COVID outbreak in the last 14 days, or plan to commence work at one of these settings during this clinical placement period? This includes paid work or on a student placement.		
Are you currently unwell with any cold or flu-like symptoms (including but not limited to, fever, cough, sore throat, shortness of breath, loss of taste or smell, vomiting or diarrhoea)?		
Are you unvaccinated for COVID-19?		
Are you unvaccinated for this year's seasonal influenza? (Recommended for all students and required in Victoria for all students in RHC facilities)		

If you answered 'Yes' to any of the above, please advise the State Student Placement Coordinator immediately.

If students develop COVID or influenza related symptoms they should notify their educator and Education Provider, self-isolate and seek testing immediately and remain isolated until negative results are received. Send your results to your educator and education provider.

It is recommended that students do not work across multiple facilities. If a student does work at another facility such as residential aged care during their placement, they may be required to wear a respirator mask while on placement and may be subject to routine asymptomatic surveillance RAT for the duration of their placement.

Risk assessment should consider:

- If they have any family/household members who are unwell or family/household members who are isolating as they have been identified as close contacts
- If they are seeing and treating vulnerable patients
- If they are participating in the care of patients undergoing an aerosol generating procedure. If so, they must be fit tested for a P2/N95 respirator mask

Students should be advised to:

- complete the screening requirements on arrival at the facility
- strictly maintain social distancing
- adhere to jurisdictional movement and gathering restrictions
- monitor their health for any symptoms
- be immediately tested if they have any symptoms
- be vaccinated against COVID-19 and be up-to-date with recommended boosters for COVID-19

Thank you for your support, please don't hesitate to contact Shae Sandri (National Student Placement Coordinator) SandriS@ramsayhealth.com.au should you have any questions or concerns.

Student Declaration

- I declare that the details listed above are correct
- If I develop any of the above symptoms during placement, I will immediately advise the Hospital Educator, Education Provider and will not attend the hospital
